Ex 9: Exploring AI-Assisted Features and Built-in Analytics (Zia) in Zoho Creator

Topic: Patient Appointment Booking Form

V Vijay Prakash
241401128

1. Aim

To explore and evaluate the AI-assisted capabilities of Zoho Creator — Zia-based form generation, natural-language prompting and AI help in the Deluge editor — together with its built-in analytics widgets, using the Patient Appointment Booking application.

2. Procedure

Step 1: Configure built-in analytics and visual components — The Page Builder was used to design analytical components on top of the booking report data:

- **Booking Volume by Doctor (Donut Chart):** shows how appointments are distributed across doctors.
- **Booking Volume by Time Slot (Bar Chart):** shows which time slots are booked most often.
- **KPI Metric Card:** a counter displaying the total number of bookings recorded.

Step 2: Generate a form with Zia — A new form was started with the Using Zia option and a plain-English prompt describing a patient appointment form (patient name, phone, email, doctor, appointment date and time slot). The suggested fields, field types and layout were reviewed and adjusted before saving.

Step 3: Evaluate natural-language prompts — Zia's handling of everyday-language requests about the booking data was tested, such as asking for bookings grouped by doctor or for bookings on a particular date, and the results were compared with what the stored records contain.

Step 4: Check AI assistance in the Deluge editor — The code assistance available in the Deluge script editor was tried on the booking validation script, observing suggestions for syntax, variables and field link names.

3. Output

3.1 Built-in Analytics and Dashboard Widgets

The table below summarises the widgets configured on the dashboard page:

Widget Type	Widget Title	Source Field	Metric	Operational Use
KPI Metric Card	Total Bookings	Record count	COUNT(all records)	Tracks overall appointment volume
Donut Chart	Bookings by Doctor	Doctor	COUNT by doctor (%)	Shows how load is shared between doctors
Bar Chart	Bookings by Time Slot	Time_Slot	COUNT by slot	Reveals the busiest time slots

Table 1: Analytical Widgets on the Appointment Dashboard

3.2 Zia Prompt Evaluation

Table 2 records the prompts tried and what Zia produced for each:

Prompt Tried	Intended Meaning	Observed Output
Create a patient appointment form with name, phone, email, doctor, date and time slot	Generate a booking form with these fields	
Show total bookings by doctor	Group records by Doctor and count them	
List bookings for a given date	Filter records on Appointment_Date	

Table 2: Zia Prompt Evaluation on the Appointment Booking Application

3.3 AI Code Assistance in Deluge

Feature	Where Used	What Was Observed
Code completion	Validate appointment script	
Syntax and error checking	Validate appointment script	

Table 3: AI Assistance in the Deluge Script Editor

4. Result / Observations

AI-assisted features and built-in analytics were explored in Zoho Creator using the Patient Appointment Booking application:

1. Built-in chart widgets and a KPI card gave a quick visual summary of booking volume by doctor and by time slot without writing code.
2. Zia's form generation produced a booking form from a plain-English description, which could then be reviewed and adjusted in the form builder.
3. Natural-language prompts and the code assistance in the Deluge editor were tried against the application's own data and scripts.
